

Sustainable Groundwater Management Support for the Arvin-Edison Water Storage District

EKI is developing and implementing a comprehensive strategy for the Arvin-Edison Water Storage District (AEWSD) for Sustainable Groundwater Management Compliance (SGMA), including Groundwater Sustainability Agency (GSA) formation and preparation of a Groundwater Sustainability Plan (GSP) for the groundwater basins underlying the District (i.e., the Kern County Subbasin and the White Wolf Subbasin).

As part of the Project, EKI is performing the following:

- Evaluating benefits and drawbacks of various SGMA compliance options within the Kern County and White Wolf Subbasins.
- Providing technical and engineering support related to a comprehensive evaluation of the groundwater system underlying and surrounding the AEWSD service area.
- Supporting outreach to landowners, state and federal agencies, environmental groups, the Regional Water Quality Control Board, and the public.
- Supporting AEWSD in its peer review of the Kern County Subbasin Proposition 1 grant funding application.
